👤 PROFILE

Ambitious BCA second-year student and aspiring Full-Stack Developer with hands-on experience in building responsive and user-friendly web applications. Skilled in frontend development using HTML, CSS, JavaScript, and React, and learning backend technologies to develop scalable full-stack solutions. Passionate about real-world problem solving, continuous learning, and working on impactful projects. Seeking opportunities to gain professional experience and contribute to modern web development

🏠 SKILLS

Programming Language

C++, Java, Python

Web Technologies

HTML, CSS, JavaScript, React.js, Bootstrap, Tailwind CSS

Backend & Frameworks

Django, Django REST Framework

Databases

MySQL, MongoDB

Tools & Platforms

Git, GitHub, VS Code, Postman

Computer Applications (ADCA)

MS Word, MS Excel, MS PowerPoint, Tally

Design Tools

Adobe Photoshop, Adobe PageMaker

📁 PROJECTS

Student management system,, 08/2025 – Present

Web-based student record and result management platform

Created a web-based Student Management System using Django for backend logic and HTML, CSS, and JavaScript for frontend. The project supports student registration, attendance tracking, marks entry, and result generation. Integrated database connectivity to securely store records and implemented validation to ensure data accuracy. Focused on delivering a user-friendly interface and improved administrative efficiency through automation.

Restaurent management system, 10/2025 – 12/2025

Full-stack restaurant order & billing system

Built a full-stack Restaurant Management System using Django for backend and HTML, CSS, and JavaScript for frontend. Features include order management, menu updates, customer billing, and real-time status tracking. Designed responsive UI for smooth navigation and implemented database connectivity for storing and retrieving menu and order records. Improved operational efficiency by automating order and billing workflows.

Ngo management system,, 11/2025 – Present

Web-based NGO management & donation tracking system

Developed a full-stack NGO Management System using React.js and Tailwind CSS for the frontend and Django REST Framework for the backend. The system enables NGOs to manage donors, volunteers, and projects, and track donations efficiently. Implemented secure API communication, tested endpoints using Postman, and ensured a responsive and user-friendly interface. The platform improves transparency by maintaining digital records of donation history and volunteer activities.

🎓 EDUCATION

Govt. Geetanjali Girls PG Autonomus , college Bhopal, BCA 2nd year 2024 – 2025 | Bhopal

Pursuing BCA with a focus on programming, web development, databases, and software technologies. Actively developing full-stack projects using Python, Django, React.js, and Tailwind CSS to gain practical experience and strengthen problem-solving skills.
